

Objects visible for September 2024 at 10:30pm

Astrophotography

We plan to photograph objects from the following list. We won't have time to do all of them so I either pick the best ones or you can choose.

The number of things we see depends on how clear the sky is.

If the session is brought forward to 8:30pm, the list below will be different.

Scroll down for objects at 11:30pm.

17 Inch Telescope:

Planets: Saturn

Emission Nebulae Lagoon Nebula, Trifid Nebula, Swan Nebula, Eagle Nebula, Tarantula Nebula

Dark Nebula: Snake Nebula

Globular Clusters: 47 Tucanae.

Open Clusters: Butterfly, Ptolemy's

Galaxies: Silvercoin galaxy

Planetary Nebulae: Helix, Dumbbell Nebula

3 Inch Telescope:

Small Magellanic Cloud

Takahashi FSQ106edx4 Telescope using our CCD Camera

Tarantula Nebula Region or NGC 6188
